

Java

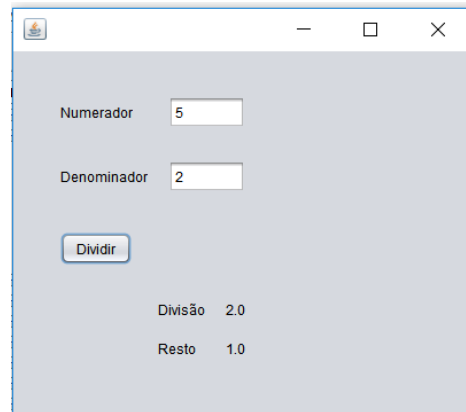

Operadores matemáticos

Exercício

Crie um programa de verificação de divisões.

A Java Swing window titled "Divisão" with a light gray background. It contains two text input fields: "Numerador" (Numerator) and "Denominador" (Denominator). Below the fields is a button labeled "Dividir" (Divide). At the bottom, the results are displayed: "Divisão 0" and "Resto 0".

The same Java Swing window as the first screenshot, but with the "Numerador" field containing the value "5" and the "Denominador" field containing the value "2". The "Dividir" button is still present. The results at the bottom are now "Divisão 2.0" and "Resto 1.0".
